

How do marine microbial communities respond to petroleum products, plastics and pesticides?

Can we identify the fingerprint of anthropogenic impact in large-scale marine datasets?

If you are interested in these questions, we are seeking a motivated, curious, hard-working and creative

postdoc and graduate student

to join an interdisciplinary team aiming to answer these questions using tools from **microbial ecology**, **oceanography**, **bioinformatics** and **data sciences**.

A competitive scholarship will be provided to successful applicants.

For more information, please see our lab website:
