Postdoctoral Research Opportunity

We're seeking a highly motivated and talented postdoctoral researcher to join our team. Our research focuses on Myxozoa from the Cnidaria phylum, exploring host-parasite interactions and testing resistance vs. susceptible fish hosts.

The successful candidate will conduct field work to collect samples and study Myxozoa in their natural habitats, followed by molecular studies using genomics, proteomics, and metabolomics methods.

Experience with molecular techniques and bioinformatics is essential.

For more details, please contact Prof. Tamar Lotan:
